A Changing World

We will see even more change in the near future.

Definitions

Digital Content is defined as any content distributed through digital infrastructure as well as traditional retail channels.

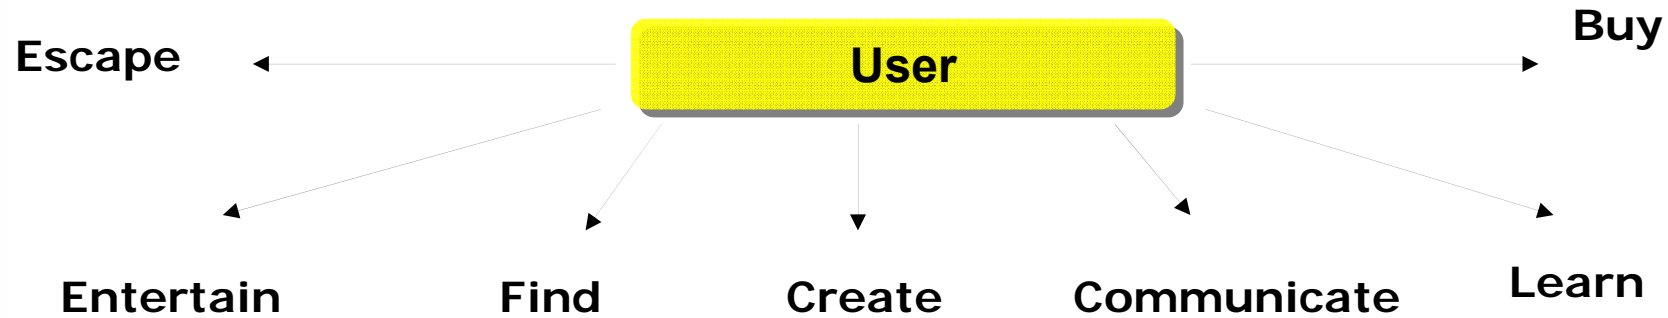

Today, we pay for accessing this content.

In the future, we will have a massive amount of free content and we shall pay only for premium content – and pay for these ad-hoc and on-demand.

This means that the role of sponsors and advertisers will become increasingly important.

How will this affect my business – when and how much?

Digital Content Market Structure

Content – Media
Services

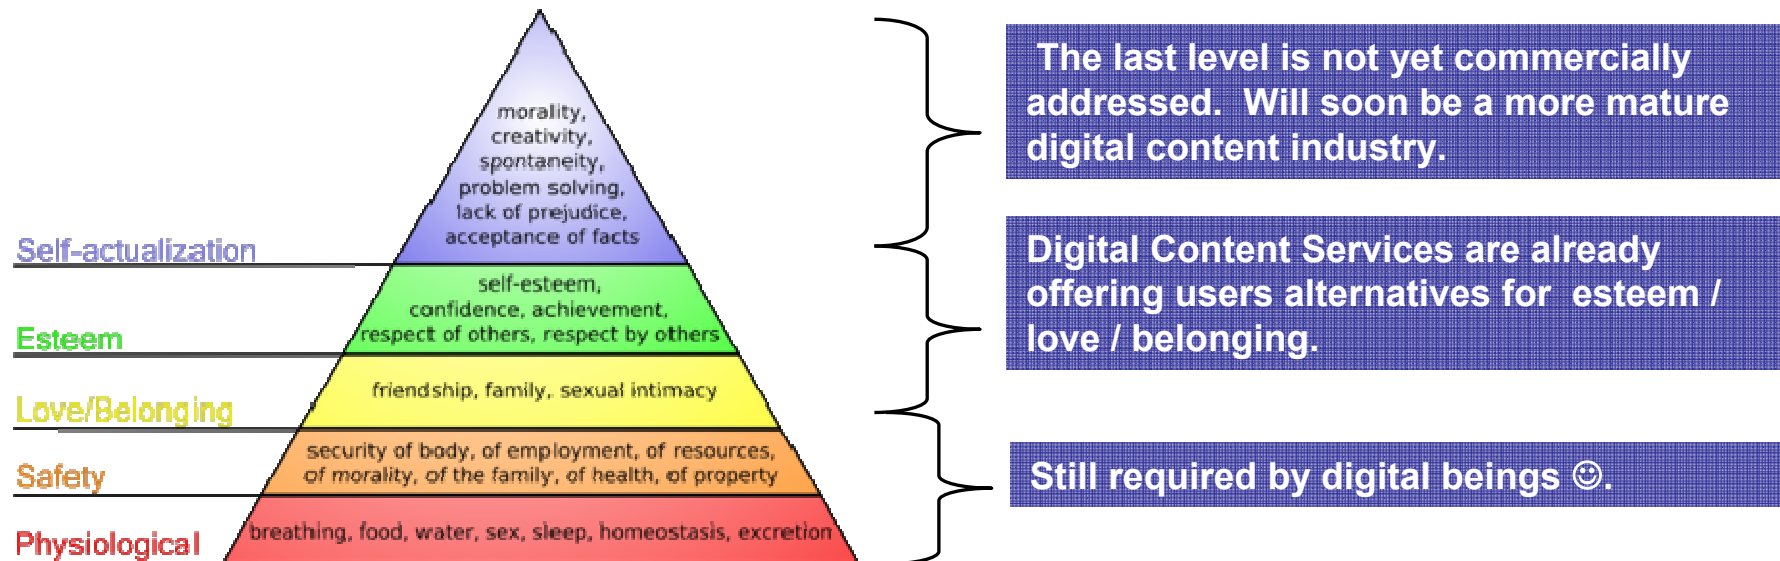

User Devices
TV Sets, Telephones, players, PCs, game consoles, etc.

Networks
Mobile cellular, broadband networks, cable and IPTV

Digital Content

Digital Content Industry encompasses (1) digital data and services, (2) distribution channels, (3) other digital devices

Digital Content Needs [versus Maslov]

Digital content offers instant and constant gratification and can even replace the basic needs of millions of [young] people. What are the consequences for society? How to make money from these new paradigms?

Why Triple Play?

Consumers

- One Bill
- Lower Pricing (per Service)
- Integration of Services (Internet+Telephony, TV+Broadband, etc.)

Operators

- Realize Potential of Multiservice Network Equipment
- Expand Service Offering
- Increase ARPU (Increased Revenues with Lower Additional Cost)
- Increase Subscriber Base and Its Loyalty (Lower Churn Rate)
- New advantage for wireline [in competition with cellular]

Vendors

- Increase NGN Equipment Sales by Upgrading Provider Networks
- Test and Introduce New Disruptive Technologies
- Enter New Markets (Through M&A or Generic R&D Breakthroughs)
